

Security: Confidence in Every Ride

The security of your micro-mobility vehicle encompasses more than just a safe ride—it also safeguards your investment. Hirose connectors, such as those in our .FL Series, support **critical IoT features like real-time tracking and intelligent locking systems**, which operate behind the scenes to enhance your vehicle's security.

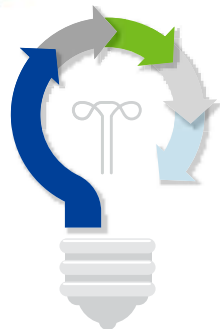

The **C.FL** series connector, with its compact design and clear, tactile lock, offers an exceptional solution for IoT applications. These **connectors not only enhance security against theft, tampering, and vandalism but also facilitate key features such as alerts for suspicious activity** and, in certain cases, remote disablement of the vehicle.
